Press releases > AD-WISE announcements in the local and European press

1. Europe wants to maximise agroindustrial biogas production through ICTs

The European project AD-WISE is developing an on line system to optimise the agroindustrial biogas generation process. ainia is leading this European research in which four other organisations are involved: the Fraunhofer Institute (Germany), Farm San Ramón (Spain), Interspectrum (Estonia) and The National Microelectronics Applications Centre (Ireland).
Europe is betting on agroindustrial biogas as one of the sustainable alternatives in the production of renewable energy. Currently, our continent has more than 7000 running biogas plants, with an installed capacity of more than 4000 MWe (source EBA).
